PROFESSIONAL SUMMARY

Software Developer with 4 years of hands-on experience developing production web applications and digital assessment products. Specialized in React.js, JavaScript, Redux Toolkit, REST API integration, and browser-based computer vision using OpenCV. Experienced in building scan-based exam workflows, reusable UI components, and performance-focused applications, with working knowledge of AWS (EC2, S3, IAM), Docker, and Git. Strong focus on clean architecture, problem-solving, and delivering production-ready features. Leverages Cursor through a self-funded monthly subscription for AI-assisted development, improving productivity and helping deliver client projects on time.

WORK EXPERIENCE

Associate Analyst - Software Development

Digival IT Solutions | Sep 2022 - Present

Digi Scanner | React Exam-Scanning App

- Built the full student and staff scan flow in React, Vite, and Redux Toolkit (capture to submit).
- Ran OpenCV document detection in a Web Worker so the camera UI stays smooth.
- Added face login and MediaPipe liveness checks (hand pose and head-yaw).
- Stored scanned booklets in IndexedDB with iOS-safe, per-student persistence.
- Submitted pages via signed URLs with retry/resume, token refresh, and Docker deploy.

Digi Assess | Scan-Based Manual Evaluation

- Built evaluation flows so graders mark scanned answer booklets student-by-student.
- Developed student list UI with search, pagination, and status filters.
- Implemented booklet evaluation with mark entry, annotations, and unsaved-change handling.
- Integrated APIs for questions, marks import, evaluation config, and activity history.

PERSONAL PROJECTS

AutoMicro-Bot | macOS Desktop AI Agent

github.com/Akash-develop/AutoMicro-Bot

- Built a local-first floating macOS desktop agent with Tauri 2, React 19, and Python.
- Backend uses FastAPI and LangGraph for tool execution and streamed LLM answers.
- Natural-language control: open apps, drive the browser, and run multi-step flows.
- In-app model settings for Ollama and other providers, plus SQLite chat memory.

EC2 Host Portfolio | AWS Learning Project

github.com/Akash-develop/EC2-host-portfolio

- Hosted a personal portfolio on AWS EC2 through self-directed weekend learning.
- Hands-on practice with AWS EC2, S3 bucket setup, IAM configuration, and Docker.
- Used this project to build real cloud skills alongside production application work.

TECHNICAL SKILLS

Languages & Frontend: JavaScript, Python, React.js, Redux Toolkit, Vite, HTML, CSS

Vision & Auth: OpenCV (Web Worker), MediaPipe liveness, Face login

Cloud & DevOps: AWS EC2, AWS S3, IAM, Docker

AI & Backend: FastAPI, LangGraph, LangChain, Tauri, Ollama, SQLite, Cursor

Data & Tools: REST APIs, IndexedDB, Signed URLs, Git, GitHub
